# STIC Search Results Feedback Form

## EIC 3600

Questions about the scope or the results of the search? Contact **the EIC searcher or contact:**

**Karen Lehman, EIC 3600 Team Leader**  
**306-5783, PK5- Suite 804**

### Voluntary Results Feedback Form

➤ I am an examiner in Workgroup:  Example: 3620 (optional)

➤ Relevant prior art found, search results used as follows:

- 102 rejection
- 103 rejection
- Cited as being of interest.
- Helped examiner better understand the invention.
- Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- Foreign Patent(s)
- Non-Patent Literature  
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art not found:

- Results verified the lack of relevant prior art (helped determine patentability).
- Results were not useful in determining patentability or understanding the invention.

**Provide the PALM Bib page or the following:**

Title of Invention: Automating the Process of Purchasing a Memory Upgrade for a Computer System

Inventors (provide full names): Paul R. Petersen

Earliest Priority Filing Date: 10/18/99

**Requested attachments:**

- If possible, provide the cover sheet, the IDS, examples, or relevant citations, authors, etc, if known.
- Please attach copies of the parts of this case that help explain or are most pertinent to this search. Examples are: abstract, background, summary, claim(s) [not all of the claims].

**The claimed or apparent novelty of the invention is:**

A system that facilitates purchasing a memory upgrade for a computer system, based on the computer system's memory configuration information and an upgrade based on the configuration information. The system determines a memory upgrade option based on configuration information. After obtaining the memory configuration information, the system presents an option to purchase the memory upgrade option to a user of the computer system. The system automatically initiates the purchase of the memory upgrade once the user approves the purchase.

**This search should focus on:**

(Also include keywords or synonyms)

computer memory      computer upgrade  
determine computer requirements/capabilities  
computer configuration data      Internet

purchase upgrade  
on-line purchase

## RE: Automatic RPM upgrading

Steven Bolbot asked...

> Hi  
> Does anyone know if a program exists that can version check the RPM's you  
> have on your system against the /updates directory on a RedHat FTP site,  
> and then automatically download and upgrade to the new versions of those  
> programs?

I found (but haven't tried)...

Cheers,

TonyR

From: Dirk Lutzebaeck [<mailto:lutzeb@cs.tu-berlin.de>]  
Sent: Thursday, 19 March 1998 1:26  
To: [redhat-announce-list@redhat.com](mailto:redhat-announce-list@redhat.com)  
Subject: freshrpms: FTP mirror latest RPM packages installed on your  
system

Finally, freshrpms is back in the contest of rpm FTP update  
managers :) Besides autorpm, rhupd, xrpm, rhupgrade - you name it -  
freshrpms version 0.7.1 offers new features compared to the last  
version 0.6.1 some months ago:

- additionally check noarch architecture besides the specified binary  
architecture
- allow alphanumeric characters and dots containing releases strings  
of packages (eg. rpm-2.4.10-1glibc.i386.rpm)
- allow FTP reget for partial downloads
- checks PGP signature / MD5 sum after download
- show the size of the package to be downloaded and show download time  
after successful download
- show the remaining download time and speed indicator while downloading  
note: this does a fork and periodically checks the current file size  
against the download size
- specify the root directory for 'rpm' command using option -r, --rootdir
- verbose option (-v) now shows why it is downloading a newer version

You'll soon get it from the RH contrib directory or now from

<ftp://ftp.cs.tu-berlin.de/pub/local/flp/lutzeb/software/freshrpms/freshrpms-0.7.1-1.noarch.rpm>

You need Perl 5.004 and the libnet package which you can get also from  
the RH contrib directory or from

<ftp://ftp.cs.tu-berlin.de/pub/local/flp/lutzeb/software/contrib/i386/libnet-1.0502-4.noarch.rpm>

Here is the official blurb of freshrpms:

Freshrpms fetches RPM packages from FTP servers which are newer than the ones installed on your system. It makes only sense on a UNIX system which uses the RedHat package management system (look at <http://www.rpm.org> and <http://www.redhat.com>).

Freshrpms is a Perl5 script which fetches RPM packages from FTP servers which version numbers are higher than the ones installed on your system. freshrpms does not install any RPMs by itself but makes use of the rpm package manager program to determine which RPM packages are currently installed. freshrpms uses a configuration file to accomplish its task which defines multiple FTP servers, directories to look for RPMs, local download directories and local archive directories for installed RPMs. It can also garbage collect local archived RPMs which are older than the currently installed ones. freshrpms prints the names of the packages which are newly retrieved. Exit status is non-zero if any severe failures happen but not for FTP operation failures.
